Summary

- Researcher in multi-agent systems, decision-making, and human-AI interaction. I study how decision-makers, human and artificial, act well individually and together, through game theory, mechanism design, multi-agent systems, human-subjects research, and applied LLMs. Ph.D. in Software and Information Systems Engineering (Ben-Gurion University); postdoctoral fellow at Carnegie Mellon's Robotics Institute. Recipient of the Best Paper Award at ACM EC 2016 and a Communications of the ACM Research Highlight (2018), with publications in JACM, AIJ, CHI, IJCAI, and Science Translational Medicine. Over a decade of experience translating research into production — built predictive systems at Amdocs saving millions annually, deployed clinical ML models at Diagnostic Robotics, led NLP/LLM research at DICTA, and now founder of MashInnovateAI.
 - **Core Skills:** Game Theory & Mechanism Design · Multi-Agent Systems · Human-Subjects Experiments · Social Choice & Fair Division algorithms · Markov Decision Processes (MDP) · Reinforcement Learning · Human-Centric AI · Applied AI · AI Research · Natural Language Processing (NLP) · LLM fine-tuning · Retrieval-Augmented Generation (RAG) · Agentic AI · End-to-end delivery (proof of concept → production) · Python · PyTorch · HuggingFace Transformers · Production ML · SQL · Distributed Training · Healthcare & Clinical ML
-

Research Interests

Multi-Agent Systems, Decision-Making, Game Theory and Mechanism Design, Human-AI Interaction, Human-Centric AI, Artificial Intelligence, Machine Learning, Natural Language Processing, Data Science Workflows.

Research Agenda

My research centers on decision-making by self-interested and bounded agents, human and artificial, studied through game theory, mechanism design, multi-agent systems, and human-subjects experiments. I am developing a new direction that extends this to LLM-based agents: learning what an agent should communicate to a human, and how, from human preference, in mixed human-agent settings such as autonomous and human-driven vehicles.

My active research applies large language models and modern NLP to high-value text-analysis problems, organized around two directions aimed at peer-reviewed and patentable outcomes: (1) computational analysis of Hebrew and rabbinic texts — authorship attribution, automatic citation generation, and semantic cross-referencing (with DICTA); and (2) computational analysis of legal and patent text, including textual studies of disparate outcomes in the patent system. Both involve fine-tuning LLMs for prediction, clustering, and semantic analysis of domain-specific corpora, and build on prior work spanning multi-agent systems, game theory, and human-centric AI.

Education

Ph.D., Software and Information Systems Engineering | Ben-Gurion University of the Negev | 2014–2018

- **Dissertation:** Reaching Fair Agreements in Group Settings
- **Advisor:** Prof. Ya'akov (Kobi) Gal

M.Sc., Computer Science (AI specialization) | Bar-Ilan University | 2011–2013

- **Thesis:** Joint Exploration with Self-Interested Agents
- **Advisor:** Prof. David Sarne

B.Sc., Software Engineering | Shenkar College of Engineering and Design | 2007–2011

Awards & Recognition

- **Best Paper Award** – ACM Conference on Economics and Computation (2016)
- **Communications of the ACM Research Highlight** – Which Is the Fairest (Rent Division) of Them All? (2018)
- **Excellence in Teaching Award** – Ben-Gurion University (2016, 2017)
- **Ph.D. Scholarship for Academic Excellence** – Ben-Gurion University (2014)

Academic Positions

Postdoctoral Researcher | Carnegie Mellon University, Robotics Institute | 2019–2022

- Hosted by **Prof. Reid Simmons** and **Dr. Stephanie Rosenthal**.
- Conducted research on the behavior and cognitive processes of machine learning practitioners as they develop AI models.
- Designed frameworks to capture, model, and analyze workflows, with emphasis on decision-making, iteration cycles, and knowledge bottlenecks.
- Developed predictive methods to identify critical moments of difficulty (“stuckness”) in ML development, enabling targeted support and improved productivity.
- Collaborated with multidisciplinary teams to integrate human-centric AI approaches into machine learning tools and environments.
- Mentored students in AI and human-computer interaction research.
- Research funded by J.P. Morgan, which renewed the award for a second consecutive year based on the project's strong results.

Research Assistant | Weizmann Institute of Science | 2011–2012

- Developed image-processing algorithms for 3D biomedical images.
-

Industry Research Positions

Principal AI Researcher & Founder | MashInnovateAI | 2024–present

- Independent AI research & development consultancy delivering end-to-end custom AI systems — NLP, LLM fine-tuning, RAG, agentic and multi-agent LLM systems, and applied ML — from proof of concept to production deployment for research and industry partners.
- Clients include startups, established companies looking to integrate AI into their products and workflows, and universities and academic research groups.

AI Researcher | DICTA - The Israel Center for Text Analysis | 2022–present

- Conduct research at the intersection of computational linguistics and Jewish studies, focusing on rabbinical and modern Hebrew.
- Developed NLP pipelines for authorship attribution, including models predicting the rabbi/author of texts where attribution is disputed.
- Achieved high predictive accuracy and used these models to weigh in on long-debated questions of authorship in classical Jewish texts — determining the likely author of works whose attribution had been disputed in traditional scholarship.
- Designed AI-driven systems for automatic citation generation and cross-referencing of classical sources.
- Built advanced machine learning and LLM-based tools to support scholarly research in Hebrew texts, integrating prediction, text similarity, and semantic analysis.
- Took models from research through to production deployment, delivering systems that are actively used by scholars and researchers for live analysis of Hebrew texts.
- Published prototypes and tools provided academic collaborators with tools enabling automated scholarly insights.

AI Researcher | Diagnostic Robotics | 2019

- Developed machine learning models for the healthcare domain, with applications in risk prediction (e.g., ER diagnoses, hospitalization forecasting).
- Collaborated with clinicians and researchers to refine AI-driven predictive healthcare decision-support systems.
- Tech stack: Python, scikit-learn, and clinical/EHR data pipelines.

AI Researcher | Amdocs | 2018-2019

- Led the development of an innovative system predicting at-risk maintenance contract renewals, saving the company millions of dollars and still in operational use years later.
- Designed, built, and deployed the system from scratch, including problem definition, algorithm design, evaluation, and deployment pipeline.
- Tech stack: Python, scikit-learn, SQL, and a production deployment pipeline.

Teaching & Advising

Ben-Gurion University of the Negev – Software and Information Systems Engineering Dept.

- Teaching Assistant, Databases – Fall-Spring 2016, 2017, 2018
- Teaching Assistant, Analysis and Design of Software Systems – Spring-Summer 2016, 2017, 2018
- Teaching Assistant, Intelligent Systems – Spring-Summer 2015
- Teaching Assistant, Decision Support Systems – Fall-Spring 2015
- Departmental Seminar Coordinator – 2015, 2016, 2017, 2018
- Final Projects Coordinator (4th Year) – 2015, 2016, 2017, 2018
- Final Projects Adviser (Undergraduate) – 2015, 2016

Tel-Aviv Yafo Academic College – Information Systems Dept.

- Professor, Databases – Spring-Summer 2015, Fall-Spring 2015
- Lecturer, Game Theory – Spring-Summer 2015
- Teaching Assistant, Databases – Spring-Summer 2014

Bar-Ilan University

- Teaching Assistant, Statistical Methods in Computer Science – Spring-Summer 2014
- Teaching Assistant, Object-Oriented Programming – Fall-Spring 2013, 2014
- Teaching Assistant, Machine Learning – Fall-Spring 2014
- Teaching Assistant, Introduction to Computing – Fall-Spring 2013

Shenkar College of Engineering and Design

- Teaching Assistant, Introduction to Programming Systems – Spring-Summer 2012
- Teaching Assistant, Introduction to Computer Science – Fall-Spring 2012
- Teaching Assistant, Introduction to Object-Oriented Programming – Fall-Spring 2012

College of Management (Academic)

- Teaching Assistant, Object-Oriented Programming – Spring-Summer 2012

High School Teaching (Israel Ministry of Education)

- Mathematics Teacher (2010–2013) – taught Bagrut levels 3–5 points, specializing in students with learning disabilities (via Nitzan Association).

Professional Service

- **Reviewer:** AAAI, IJCAI, AAMAS, KDD, CHI, EC, ECAI, Group Decision & Negotiation
 - Developed voting algorithm for Best Paper selection (IAAI 2018)
 - Organized departmental seminars at Ben-Gurion University
-

Military Service

Israel Defense Forces (2004–2007)

- Infantry Special Forces (89th Commando Brigade)
- Developed internal qualification & operations management system
